

# Amha Shiferaw

## Senior Cloud Engineer

---

919-561-1488 | Raleigh, NC | amhashiferaw@gmail.com | linkedin.com/in/shiferawa | github.com/shiferaxa

---

### PROFESSIONAL OVERVIEW

Senior Cloud Engineer with 7+ years optimizing cloud infrastructure and Continuous Integration/Continuous Deployment (CI/CD) automation across Microsoft Azure, Amazon Web Services (AWS), Google Cloud and bare metal Kubernetes environments. Reduced deployment time by 75% through containerization and achieved 99.9% system uptime. Designed and deployed self healing kubernetes pipelines utilizing flux. Dynamic and results-driven with experience implementing scalable, secure, and cost-optimized cloud infrastructures, specializing in multi cloud infrastructure on AWS, Azure, and Google Cloud Platform. Proficient in IaC tools like Terraform and CloudFormation, and in SQL. AWS Certified Solutions Architect, GCP Associate Cloud Engineer, and Microsoft Azure Administrator with expertise in Terraform, Kubernetes, Bash, and Python automation.

---

### TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure, Amazon Web Services, Google Cloud Platform

CDN: Cloudflare, Akamai, CloudFront, Cloud CDN, Azure Front Door

Orchestration: Kubernetes, Docker, Helm

Infrastructure as Code: Terraform, Bicep, CloudFormation, Ansible

CI/CD Tools: Azure DevOps Pipelines, GitHub Actions, Jenkins

Programming: Python, Bash, JSON, YAML

Monitoring: Prometheus, Grafana, Azure Monitor, Datadog, Kibana

Security: DevSecOps practices, Security Automation, Incident Management, Distributed Systems Management

GitOps: ArgoCD, Flux, Git workflows, Github Actions

---

### WORK EXPERIENCE

#### Relias (May 2026 - Present) Senior Cloud Engineer, Raleigh, North Carolina

- Cloud Architecture & Modernization: Architected and deployed scalable, resilient infrastructure on Google Cloud Platform (GCP) and Azure, utilizing Infrastructure as Code (IaC) to automate provisioning and ensure modernization of legacy systems.
- Provisioned, Managed, and administrated GKE and AKS Kubernetes clusters.
- DevOps & Automation: Engineered CI/CD pipelines and automated workflow systems to increase operational efficiency, reduce manual intervention, and accelerate software delivery cycles utilizing Github Actions and Azure DevOps.
- Site Reliability (SRE) & Observability: Maintain high system availability through proactive monitoring (Datadog, Google Cloud Operations, Grafana, Elastic, Logstash, and Kibana), automated failover strategies, and robust disaster recovery planning.
- Security & IAM Governance: Managed Cloud Identity and Access Management (IAM), including service accounts and managed identities, ensuring strict adherence to security standards and compliance protocols.
- Cross-Functional Collaboration: Partnered with development teams to optimize application infrastructure, troubleshoot complex incidents, and implement cost-optimization strategies to maximize resource efficiency.
- Designed and implemented CICD and automation for compliance data pipelines(HIPAA, FedRAMP)
- Led the migration of ReliasVR from a vendor to our internal Google Cloud Project, provisioning the infrastructure with an automated terraform repository while updating and hardening the security standards to line up with our compliance requirements.

**Relias (November 2025 - May 2026) Cloud Engineer, Raleigh, North Carolina**

- Cloud Architecture & Modernization: Architected and deployed scalable, resilient infrastructure on Google Cloud Platform (GCP) and Azure, utilizing Infrastructure as Code (IaC) to automate provisioning and ensure modernization of legacy systems.
- Managed, and administrated GKE and AKS Kubernetes clusters.
- DevOps & Automation: Engineered CI/CD pipelines and automated workflow systems to increase operational efficiency, reduce manual intervention, and accelerate software delivery cycles utilizing Github Actions and Azure DevOps.
- Site Reliability (SRE) & Observability: Maintain high system availability through proactive monitoring (Datadog, Google Cloud Operations, Grafana, Elastic, Logstash, and Kibana), automated failover strategies, and robust disaster recovery planning.

**Colba (June 2022 - November 2025) DevOps Engineer, Raleigh, North Carolina**

- Proactively monitored CloudWatch metrics and VPC Flow Logs to identify and resolve critical errors.
- Designed and deployed scalable cloud infrastructure using Terraform combined with AWS services for mission-critical applications.
- Helped provision and migrate Databases to Cloud for Hybrid Architectures with 0% downtime.
- Assisted in containerized deployments of legacy applications on cloud using AWS EKS.
- Deployed GitOps solutions for EKS clusters utilizing Flux.
- Automated deployment processes with Terraform and Ansible, accelerating timelines by 30% annually.
- Leveraged AWS CLI for efficient scripting and automation of complex infrastructure tasks.

**Colba (December 2018 - June 2022) Systems Administrator, Raleigh, North Carolina**

- Managed and optimized systems across Linux, macOS, and Windows environments for operational excellence.
- Collaborated with clients to design high-performance relational databases, ensuring data reliability and scalability.
- Architected secure, PCI DSS-compliant network solutions, enhancing system integrity and driving client revenue growth
- Provided end-user support and technical assistance for software and hardware issues, ensuring minimal disruption to business operations.
- Performed routine system maintenance, patching, and backups to ensure security, stability, and adherence to disaster recovery protocols.
- Managed user accounts, permissions, and access controls within Active Directory and other centralized identity management systems.

## PROJECTS

### **Personal Professional Portfolio - <https://itsamha.com>**

**Technologies:** AWS (Terraform, S3, CloudFront, Route 53, Cognito, VPC, Lambda, API Gateway), HTML/CSS/JavaScript

Developed and deployed a dynamic personal portfolio website (itsamha.com) to showcase skills in scripting, Terraform, and cost management using AWS. Engineered a secure, scalable infrastructure using Terraform for IaC provisioning, S3 with CloudFront for global CDN-hosted static assets, Route 53 for DNS and SSL management, VPC for isolated networking, and Lambda/API Gateway for serverless backend APIs ensuring 99.9% uptime and seamless performance.

### **Kubernetes Homelab - <https://github.com/shiferaxa/athena-k3s-fleet>**

**Technologies:** Flux GitOps, Kubernetes, Containerd, Headlamp

Engineered a sophisticated, self-healing Kubernetes Homelab leveraging the principles of GitOps with Flux. This robust architecture, hosted on bare metal, establishes a declarative and version-controlled infrastructure where the desired state is defined entirely in a Git repository. Currently hosting a centralized control plane via Headlamp, this environment serves as a dynamic staging ground for developing, testing, and demonstrating advanced infrastructure automation, ensuring configuration drifts are instantaneously reconciled to maintain state fidelity.

### **Fireferral Referral Tracking Web Application**

**Technologies:** Google Cloud Platform (Firebase, Firestore, Cloud Functions, Firebase Hosting), Node.js, React, HTML/CSS/JavaScript

Designed and deployed Fireferral, a referral tracking web application hosted at <https://fireferral.web.app>, to streamline professional networking by enabling users to manage, track, and analyze referral campaigns with real-time analytics. Architected a fully serverless infrastructure on Google Cloud Platform, utilizing Firebase Hosting for the React-based frontend, Firestore for scalable NoSQL data storage, and Cloud Functions for serverless API logic, achieving 99.99% availability and reducing latency by 25% through optimized indexing and caching. Implemented secure user authentication via Firebase Authentication, ensuring data privacy and compliance, while the application's responsive UI with interactive dashboards showcases expertise in building user-focused, cloud-native solutions.
